

SAFE YARNS™

THE PRODUCTS

SewSystems provide specialist machinery developed for use with **SAFEYARNS**. Machines activate the yarn & bond down the seam.

for more information on SewSystems Machinery

1. HEMSAFE

Stops HEMS from falling down.

...it is available in white and black colours, and is for use with mid to heavyweight fabrics.

Step 1: **HEMSAFE** replaces one looper thread during overlocking

Step 2: After blind hemming garment is pressed and **HEMSAFE** melts and fuses

Step 3: The bonding element of **HEMSAFE** transfers to the unstitched side of garment fusing the hem and creating a flat profile

2. HEMSAFE light

Also stops HEMS from falling down, but has a lower Decitex count and is for use with mid to lightweight fabrics.

HEMSAFE light prevents puckering in the hems and seams of lightweight garments.

Another benefit of **HEMSAFE** is that it creates ultra flat seams after overlocking. These ultra flat seams give a superior comfort factor to garments using **HEMSAFE** fused yarns

3. BUTTONSAFE

- Stops buttons coming loose or falling off
- The threads bond together in the normal steaming process and cannot come undone.
- No modification or extra operation necessary just use as a normal needle thread
- Increased security – up to twice the strength of normal sewing!
