Spot Tacking Unit SSM310

**Very low cost option for manual assembly or pre positioning
before final bonding**

The SSM310 Spot tacking gun is for tacking seams over in selected areas that have the adhesive already applied, before running through the bonding machine.

It is also very useful in sample rooms to view the finished seam without permanently fixing it in place

- Variable temperature from 150 to 450 degrees
- Teflon coated tip
- Tips available in various shapes as below

Model number SSM310
Min temp 150
Max Temp 450
Voltage 230v
